

METALINK

KENNELS for Pet Care Professionals

Metalink manufactures premium kennels using only the best material and employing the finest craftsmanship. Our stringent quality control ensures that each kennel we build results in the strongest, safest kennel on the market today. They are designed and crafted to provide many years of trouble-free operation. We offer kennels ranging from lighter chain link panels to professional heavy gauge welded wire panels. We can create virtually any size or shape kennel and would be glad to assist you in the design of your custom kennel.

Welded Wire Panels

Metalink's welded wire panels provide maximum strength and exceptional appearance for the professional who demands both. The 6 gauge wire provides an impenetrable barrier, and unlike chain link, has no "weak" points as it is welded to the frame, rather than tied. Aesthetics is another area in which we focus. Your customer feels better knowing that they are leaving their beloved pet in a secure, clean and attractive environment. To that end, we offer custom colors in a powder coat finish to compliment your décor. Popular choices are bronze, black and green but most any color can be accommodated.

At many facilities we are able to utilize our unique "off-the-floor" design using these panels. No part of the gate panel touches the floor, resulting in easier maintenance and cleaning. This method also extends the life of the panels since it is not subjected to repeated exposure to water and chemicals.

Best of all, we offer these kennels at a very competitive price. You may fax or e-mail your plans to us and we will gladly provide a quotation.

Cedar Park, Texas

Chain Link Panels

For the professional who prefers the traditional chain link panels, Metalink manufactures kennels to fit many different needs. Our kennels range from a light 11 1/2 gauge wire mesh to an industrial strength 9 gauge finish. Regardless of the weight, all Metalink commercial kennels have the following features:

- Welded barrel hinges for strength and to minimize gaps
- Horizontal center cross bar
- Re-enforcement bar at bottom
- Dog proof flip latch
- 1 1/2" space at bottom for wash out
- Bent frame at top, welded square at bottom for closer fit
- All welds coated with zinc
